

## Tobi's NixOS configurations

This is where I maintain my NixOS configurations for my file and compute servers.

These humble machines live in my garage. They are named after the saints.

**St. Isidore of Seville is the patron saint of the internet.** I chose this because this server is optimized for data storage.

**isidore** is an HPE MicroServer Gen10 Plus, Intel Xeon E-2224 3.4GHz  
St. Eligius is the patron saint of goldsmiths, blacksmiths, and all metal workers. Because of this, I named my main GPU server after him.

**eligius** is a CyberpowerPC PC, Intel Core i7-9700K 3.6GHz, NVIDIA GeForce RTX 2070
